Good Progress Is Being Made At Glass Plant

Big Staff at Work on The New Furnace Being Installed

Extensive alterations are now being made at the Glass Factory here. A large staff of men are at work removing part of the main floor to make room for the large new furnace which will be built as soon as possible. The old furnaces are being completely demolished and the new one will be completely new from the foundation up, and equipped with all modern improvements.

In the mean time the other furnaces and machines are carrying on as usual.

Dry Belt Should be Municipal Area

So Says Report of The Field Crop Commissioner

Sections of the dry belt in this province where unproductive soil or unfavorable weather conditions have made farming operations hazardous should be placed under the administration of the special municipal areas according to the recommendations of the special survey committee headed by O. S. Loogman, provincial field crops commissioner.

The committee which was appointed by the former government last year made an extensive study of the whole problem of farming in the dry areas.

Another of the committee's recommendations is that in areas designated under the Special Municipal Areas Act, granting of agriculture relief should be discouraged and direct relief discontinued. Development of water resources and small irrigation should be linked with a program of improved farm cultural practices, says the report.

BIG GRANT FOR ALBERTA HIGHWAY

Almost \$2,000,000 will be available in Alberta for road and highway construction this year as the result of the Dominion plan for the allocation to such work as part of the federal \$50,000,000 relief fund, it was announced by Premier Aberhart and Hon. W. A. Fallow, Provincial Minister of Public Works.

Proposed Legislation Means Loss to Town

This is What The Service Tax Means to Town

In the legislature this session it appears legislation was introduced which, if put into effect, will mean doing Redcliff out of between \$1,400 and \$1,000 a year. That is by cancelling our service tax which is collected from employees in the different industries who are paying no taxes to the town in any other way.

When the proposed legislation became known Mayor Sangster telegraphed our representative, Dr. Robinson, drawing attention to the fact that if this bill went into effect.

Dr. Robinson's answer to this telegram as to the reason for this move is not very clear. It looks very much to us that the government is playing the town Paul.

As the service tax system in the past was fair, reasonable and equitable and a considerable financial help to the town, and if it is now taken away we will all be wishing for the "help we got in ages past."

According to recent reports of the Social Credit Members of the federal house are planning for a Dominion wide convention of Social Credit supporters.

The first Social Credit government in the world prorogued at Edmonton last Tuesday after being in session nine weeks. During his session 102 new bills were passed.

Pressed Brick Plant is Now In Operation

Other Plants Preparing For Opening up Soon

The Pressed Brick plant here is now in operation again turning out the fine quality of brick for which this plant is noted. The plant has been running for the past week and expects to be kept going all summer as the stock in the yard is now getting low.

About twenty men are being employed and when building operations commence it is expected that more men will be added to the staff.

The two other brick plants in town are also making preparations to commence operations in the near future.

It is expected there will be a growing demand this spring and summer for the excellent class of brick manufactured here, as building prospects are most promising.

U. S. Tornado Takes Toll of 400 Lives

Worn Swept Over Five States
In The South

More than 175 known dead, 5,000 injured, hundreds homeless and property damage estimated in millions, were listed in the toll of tornadoes and storm bred fires which terrorized communities in half a dozen southern states.

Relief authorities estimated property damage would run from \$1,000,000 to \$6,000,000 in the cities worst affected—Lafayette, Miss., and Grainesville, Ga. The menace of storm generated fire added to the horrors of the twisters and rain.

Keep in mind the school pre-festival concert on Friday February 24th.

"What is this just price?" asked a woman on the street the other day. "Oh," said the man, "It's very simple. It's just adding 2 per cent to everything you buy so that we can have plenty in the midst of poverty. 'Oh yah!' replied The only plenty in the midst of poverty I can see is the \$1800 a year the members of the legislature who promised us so much last August, are now getting, and the province broke."

Local Stampede Asso. is to Hold A Big Carnivale

Will be Held July 30 and Evening of Stampede

Executive of the local Stampede Association is already making plans for the annual stampede here on July 1st. As added attraction to this year's program will be a two day carnival to be held on June 30 and July 1st after the Stampede events on the grounds are finished.

The carnival premises to be on a large scale with all kinds of amusements and prizes will be given besides a number of interesting side shows and exhibits.

There will also be given away a free a Shetland pony and a big door prize to the holders of the lucky number on the ticket which they purchase for entrance to the carnival.

Tickets will be on sale next week and may be secured from any member of the committee.

As tomorrow will be Good Friday all the stores in town will be closed.

Ted Henry and Neil Van 't left Monday for Great Falls. Ted expects to bring back a new car for his bus service between here and Medicine Hat.

Churches

ST. AMBROSE CHURCH

Rev H. S. Hammett, Vicar
Good Friday, 12 noon to 3. The Three Hours.

Easter Day, April 12: Holy Communion at 7 a.m., 8 a.m. and 11 a.m.

And note: that every parishioner shall communicate at least three times in the year, of which Easter to be one. (Prayer Book Rubric.)

7:30 p.m. Evensong
We regret to announce that, owing to the illness of certain principal soloists, the Sacred Cantata arranged for this evening (Thursday) by St. Barnabas church, is cancelled.

H. S. Hammett.

GORDON MEMORIAL UNITED CHURCH

Pastor Rev. R. Erskine Peow
Sunday, April 12th
10 a.m. Church School.

11:15 a.m. Morning Worship
Subject: "The Lord's Supper"
3 p.m. Service at Bowell.
Subject: "Death Defeated"
8 special Easter music at both services.

"Christ's Presence Among you as your Hope of Glory"
(Service will be held on Good Friday at 11 a.m.)

"The earth is the Lord's every trace of order, every gleam of beauty, every provision of bounty, is evidence of that fact."

ST. MARY'S CHURCH

Mass will be celebrated on the 3rd Sunday of each month at 8:30 a.m.

Children's Concert Was Big Success

Was Well Attended And All Were Well Pleased

There was a large attendance at the children's concert put on by the Gordon Memorial School last Friday evening under the auspices of the Ladies Aid and all were delighted with the splendid showing made by those taking part.

The program was made up of choruses, duets, quartettes, solos, recitations, instrumentals and novelty songs and dances.

Americana costumes worn by those taking part added much to the several numbers. As well did each reviewer his and her part that it would be impossible to single out any as of special mention.

Found Royal College To Have Anniversary

Former Students Asked to Send Name and Address

The Board of Governors of the Royal College are planning this month to celebrate the twenty-fifth anniversary of the founding of the College. The celebration program will begin on April 23rd with a public gathering in the auditorium of the College, to be followed by a reception in the dining hall.

Arrangements are being made for a reunion of former students to take part in the celebration. They are asked to send their names and addresses to the college in order to get an invitation.

At Carlson, Alta. police dogs will in future be paid \$250 per year for males and \$25 for females. All other breeds will be taxed \$1 and \$2 for males and females respectively. The dogs have been asked to pay strict attention to public safety to this effect.

There is now talk of changing the Imperial government on Daily Mail forecast the re-appointment of Prime Minister Baldwin in June, and suggested Neville Chamberlain, chancellor of the exchequer, as his successor.

The Daily Mail said the prime minister was handicapped in his house of commons by growing deafness.

Alberta's default now runs to some \$12,000,000, this including some \$9,000,000 of savings certificates. And practically all the money represented was paid over by Albertans—not the big shots. Premier Aberhart himself, in fact owns some of the \$25,000,000 issue defaulted Wednesday.

Meeting to Discuss Getting Electricity Here

Indefinite Action Delayed Until Interviewing Gas Co.

Mayor Bullivant, Al. R. McKelvie, Calder and Marsh, and engineers Davis and Rathwell, of Medicine Hat met the town council here Tuesday evening for the purpose of discussing the provision of furnishing electricity to private homes in Redcliff, from the Medicine Hat power plant.

Mayor Sangster introduced the delegation and outlined the subject of the meeting.

Mayor Bullivant said they were here at the request of the town and that as there were few towns the size of Redcliff which did not have electricity Medicine Hat was willing to co-operate with them in securing it.

As had brought experts with them to outline the proposition and give particulars as to cost.

Several important details were thoroughly discussed and satisfactory arrangements were arrived at but both the town council and the delegation were of the opinion that the first step to be taken was to make satisfactory arrangements with the Canadian Western Power and Fuel Co. which now has certain clauses in its franchise governing the situation.

Arriving at the conclusion the meeting appointed Mayor Sangster and electrician Davis to act in communication with the Gas Company to place the whole proposition before them and on receiving their reply report at a future meeting when definite action can be decided upon.

Right of resident farmers who are in financial difficulties to apply to the debt adjuster heard for assistance in effecting adjustment of liabilities, is not in the bill to repeal the agricultural stabilization act, as was before the legislature.

Alberta's default now runs to some \$12,000,000, this including some \$9,000,000 of savings certificates. And practically all the money represented was paid over by Albertans—not the big shots. Premier Aberhart himself, in fact owns some of the \$25,000,000 issue defaulted Wednesday.

Necessity Is Show For Improving Quality of Barley Grown In Western Canada

Further stress was laid at the National Barley Committee's meeting in Toronto recently on the necessity of improving the condition of western Canada barley before it could achieve popularity in the east. Tests made on the prairie showed farmers know little of what varieties they were producing, it was reported. W. R. Blackman, district seed inspector for the Dominion Department of Agriculture, at Winnipeg, said samples of seeds taken from seed drills of farmers disclosed that more than 50 per cent of the samples were barley in the rejected grades.

In his report as chairman of the sub-committee on marketing, T. G. Major, of the department, said that, as a commercial grower, the principal outlets were for malting and feed barley, though complaints had arisen regarding the presence of wild oats and other weed seeds.

Prof. H. G. Knox, of the Ontario Agricultural College, Guelph, said if growers in the west wanted a better eastern market for barley, they would have to send out a product free of weed seeds and free of prevalence of weed seeds in western barley was a serious handicap to its sale to Ontario buyers as feed.

Prof. Knox said he was not aware of any cereal grain that would give quality of finish, i.e., the color of color of fat and firmness of finish, as well as barley, in Denmark, Great Britain, South Africa, other long-standing countries, barley was regarded as the best of all grains for hogs.

An average of 73 per cent of Canada's total barley production in the last five years was fed to livestock on Canadian farms, a report submitted by W. R. White, chief of the feed division of the Dominion Department of Agriculture's seed branch, Corn, the report said, was barley's chief competitor.

What was required particularly for barley, was more educational effort concerning its merits as feed and better salesmanship in its behalf. The weak condition of western barley was a serious handicap to its ready sale, Mr. White said.

Horses Being High Prices

Keen Bidding By United States And Ontario Buyers

Farm horses, which reached a low market value during the depression years, are coming back in the picture today and are commanding high prices with United States and Ontario buyers being bidders at rural sales.

Some United States buyers have paid as high as \$600 for heavy work teams, and prices for lighter report, ranging around \$300 a team.

At the Lacombe, Alberta, sales 208 horses brought \$25,510, an average of \$83, making a high since 1928. Last year the Lacombe average was \$66. The highest prices were paid by A. Power & Sons, of whom agent purchased a team for \$387. Stewart Brothers, of Montreal, paid \$240 for a team.

Evidence of the demand for horses was provided in an auction sale at Galt, Ont., of 34 western farm animals of good quality that netted over \$4,800, with a top price of \$435 for a pair of geldings. Buyers came from all over the district, with many men making the trip to Niagara peninsula.

Paised Severe Test

Radio Guided Fifteen Planes To Airborne

Frank Gray recently gave the radio control tower at Croydon aerodrome one of the most severe tests it has ever had. It emerged triumphantly.

At one period fifteen aeroplanes were making for the aerodrome at the same time.

They were warned by radio that Croydon was booked out, and, guided by wireless, fourteen of them made safe landings at Biggin Hill, Kentley, Lynton, or some other aerodrome.

The fifteenth succeeded in making Croydon.

Its pilot, J. W. Duggan, landed safely when visibility was less than 25 yards — and provided Croydon with the sensation of the day.

The goffer had lost his bait, and, not unreasonably, was inclined to be annoyed with his cadillac.

"Why the deuce didn't you watch were it wasn't?" he asked angrily.

"Well, sir," said the boy, "it didn't usually go anywhere, and so it took me unprepared like."

Seems A Bit Queer

Two Englishmen Mentioned In News Are Backed Up

Two unusual Englishmen were mentioned in the news of Old Country papers recently. They were Charles Cruft and Charles Brown. Probably the names don't mean anything to you but they may interest you.

Charles Cruft is Cruft of Cruft's Dog Show, Mr. Cruft began promoting dog shows more than 30 years ago and from a very small beginning Cruft's has grown to be the biggest dog show in the world. The title of British dogman is entered at Cruft's and there are any new breeds of dogs developed which come frequently into his show.

Charles Brown is the carver at Simpson's restaurant in the Strand, London, that's where the world's best roast of Old England is tasted at its best.

Mr. Brown does the carving in the main dining room, and he does the carving on a wagon, you choose the place you want and he slices it off. If you want 100 or three more helpings there is no extra charge. But Mr. Brown cuts generous portions, that customers seldom ask for another, but he does say that in the good old days the tracheotomy would not be four or five "volunteers."

His record car in one day is 544 plates. There is an art in decorating a plate, say there should be one big slice in the centre and the smaller slices and trimmings built around it.

Strictly Self-Supporting

Arkansas Farmer Gets Along On Live-At-Home Program

Leo Horton, 55, has been farming on sixty acres of land in Searcy County for the last forty years, and he has never bought a stock.

But Horton does not eat a succulent. He keeps a dog of sheep, clips the wool, and wears homespun socks the year round.

Pursuing his live-at-home program to the limit, Horton says he always manages to have a patch of corn, a field of corn, some sorghum, keeps several hives of bees, a few hogs, and has never bought a stock.

But Horton does not eat a succulent. He keeps a dog of sheep, clips the wool, and wears homespun socks the year round.

The SHAPSHOOTER GUILD

At Home With Your Camera

This room has modern colored walls and a variety of tones in the furniture. Taken at 20 seconds at f/16, 1/100 sec.

Furniture dealers report a substantial increase in business. Are you numbered among those who have returned to the room or added new furniture or decorations?

If you so desire a picture of this rejuvenated room. Instead of the newly visiting friends or relatives about the new dining room, bedroom or living room suit you can have them.

It is a good time to take a very small lens set in taking "doors pictures," because you won't detail. Focus on a picture about half-way between the camera and the far side of the room. Then, when the lens stopped down you will find that practically everything is in sharp focus.

Avoid including large pieces of furniture in the foreground, lest they take up more space in the picture than they deserve.

Exposure time will vary, of course, with the brilliance of the light and the degree to which the walls reflect light. On a bright day, a picture in a practically light-colored room can be taken with an exposure of five or ten seconds. On dull days, in dark rooms having only one window, the exposure may be five minutes, with the lens at f/16.

Remember pictures, too, as "memory insurance" for the years to come when members of your family have "grown up." They will enjoy looking at the snaps of the "old homestead" when they are young.

JOHN VAN GULDER.

A Valuable Asset

National Park Good Medium To Attract Tourist Trade

The importance to Canada of her tourist trade is well recognized and in this respect the National Parks administered by the Department of the Interior operate as a medium through which the people of other countries may be attracted to the Dominion.

The measure of success for the effect of the National Parks Service for the past 20 years in developing the National Parks has resulted very largely in increasing the volume of Canada's tourist business, and in this way has placed these great scenic playgrounds in a foremost position in the economic life of the country.

Radiating energy, the sun is gradually losing not only weight but brightness.

Do This Wall Panel in Soft Colors

Household Arts by Alice Brooks

It is fascinating work

PATTERN 552

You'll find it fun to embellish this dainty shepherdess' her adoring shepherd and his sheep, which comprise a lovely wall panel as one could imagine. You have something the feeling of a picture in your work.

In pattern 552 you'll find a transfer pattern of a wall hanging. It is a lovely material requirement. Illustrations of all stitches needed for this pattern.

Household Arts Dept., Winnipeg Newspaper Union, 173 McDermott Ave., Winnipeg.

There is no Alice Brooks pattern sold.

Sees Possibility of Athabasca Becoming Greatest Gold Mining District In World

Change With The Years

Anthropologist Claims North, East And Now Becomes Larger

Indirect proof of the adage that "what is old is new" is shown by the fact that the Athabasca gold field, which was once a "hot spot" in the Saskatchewan legislature, is now a "hot spot" in the world.

For many years Dr. Hrdlicka has studied variations in facial measurements in all parts of the world. He has examined whites, negroes, Indians and even the remote Eskimos.

He found that as one grows older the ears get larger, the nose becomes longer and broader and the mouth gets wider. That is why you can tell an old friend who has been out of sight for years and exclaim: "Well, you know you've changed somewhat, but I can't say just where."

In themselves the changes would not be significant but in relationship to other features they may distort the entire remembered picture.

Dr. Hrdlicka showed that "both the nasal breadth and length increase during adult life with age, but the mouth does not increase in length that in length." Ears, he said, showed a greater increase in length than in breadth. The effect of aging is even more noticeable on the mouth than on the nose and ears, he found.

Dr. Hrdlicka found that the breadth of the nose increased as he shifted from cold to hot climates.

Famous Last Sayings

Japanese Statesman Adds To List By Question To Assassins

Dr. Hrdlicka read the story in the press about the old Japanese statesman who, on being aroused from his sleep by assassins, had three bullets fired into him and, still standing erect and facing his murderers, asked derisively: "What are you trying to do?"

This question reproached them for their bungling. More efficient assassins would have asked such a question unnecessary. The officer in command of the murder squad drew his sword and cut the old statesman down.

The cabdriver states that this officer was evidently enraged by the question asked him by the old man as he quietly looked death in the face, but more probably he sought to make the painful business.

Among the famous last words of eminent men the question this old statesman addressed to his murderers must have been the last.

The Japanese are a people with whom the word must be kept. The word which they keep is "word" and it is almost peculiar to them. As a race they seem destined to remain in the world from the rest of mankind, and time alone will determine whether co-operation with the western world will ever be feasible.

—Toronto Star.

Colonization Plan

Government Assistance For Alberta's Media Population Is Recommended

Adoption of a colonization plan in order to provide adequate government assistance for Alberta's half-breed population of approximately 12,000, is recommended in the report of a royal commission, headed by Mr. Justice Ewing, which has been tabled in the legislature by Hon. J. H. Huggart, attorney-general.

Other members of the commission were: Sir J. M. Douglas, Dr. E. A. Broadbent, and Mr. Justice Ewing, which has been tabled in the legislature by Hon. J. H. Huggart, attorney-general.

Recommendations of the commission include the approval to take up the colonization plan in an experimental way at first by selecting two areas to be set aside for farm colony purposes.

Cost Estimated \$5,000,000

Seed wheat requirements for Saskatchewan farmers unable to supply their own is tentatively set at approximately 3,500,000 bushels. Extra costs of seedling operations will have to be financed by the provincial government. The commission estimates that 3,500,000 bushels of seed wheat will be required.

It is estimated that 3,500,000 bushels of seed wheat will be required. The commission estimates that 3,500,000 bushels of seed wheat will be required.

It is estimated that 3,500,000 bushels of seed wheat will be required. The commission estimates that 3,500,000 bushels of seed wheat will be required.

"Goldfields, Lake Athabasca, has the possibility of becoming the greatest gold field in the world."

If an informed on the part of the public there will have to be a railroad built into that district."

D. A. "The Athabasca is the richest in the Saskatchewan legislature, telling about the country he has lived in long, long times as well, Saskatchewan's great northland."

"There is no such thing as a depression up there," he said. "That's why I am so glad to get home every time I go back."

He told of a gold rush of "major proportions" that would start in the spring, a rush that would be watched by the eyes of the world."

He told of spending some weeks in New York at Christmas time, of meeting many wealthy men who knew a lot and wanted to learn more about Lake Athabasca.

"The most conservative mining company in America to-day," he said, "is now a 100-ton mill in Goldfields and there is no doubt now the mill will be greatly enlarged."

Goldfields, he said, was unique. It was not so much the strikes were rich in gold, but the fact of the "rush" was the fact of the thousands of feet long had been proven to be rich in gold, ensuring the future of the "rush" for hundreds of years."

Only briefly did the member from the northern touch on the east side of the province. He said 50 per cent of the Great Flat-Plan mine was in Saskatchewan and that with a very few days of the province.

He said that the province was drawing a revenue of \$200,000 a year from that mine alone. Another mine only a few miles from the Flat-Plan mine is in production, it is the coming summer.

"What the north needs," he said, "is protection from the most progressive." He asked the government to establish schools of mineralogy in the north and to the province.

He also asked the government to strain every possible point in providing such and any means of transportation for the thousands who would try to get into the north and assist in the development of the Athabasca gold field.

Thank's For This
They

I went C.P.R.-ing

Over the prairie

Where flat things are flatter

Than ordinary,

Far things are farther,

Near things nearer,

High things higher,

Here things sever.

Earth, a shorn sphere,

Went whirling and whirling,

Twisting and twirling

Around to the rear;

Rhetoric seal how the old, wild
browses,

Fain, fainished for trees,

Shrieked in seventeen keys!

Till I feared we'd be hurled

To some fire-pointed world.

But the wind fell asleep

As the sky fell afire;

And my fears fell away,

And the Past filled a frame . . .

Thursday, May 27, 1967, is the probable actual date of King Edward's coronation. That is the belief in court circles. Coronation of Queen Victoria and King George took place on Thursdays.

Redcliff Review Clubbing Offer

TAKE ADVANTAGE OF THIS
BARGAIN OFFER
AND BANK THE DIFFERENCE

Here is a real offer that will save you money . . . Give yourself and your family lasting enjoyment and entertainment the whole year through . . . This is all you have to do.

Select any 3 of these famous Magazines
Together with your local Newspaper

and you will receive the whole 4 publications for one year from the date we receive the coupon. Here is the amazing combination low price.

\$3.00

Our Guarantee to You!

This wonderful offer is available to all and new subscribers to this newspaper. We guarantee the fulfillment of all magazine subscriptions and you have positive assurance that this generous offer is exactly as represented. Renewals will be extended for full term shown.

MAIL COUPON TODAY

- ☐ The Nor'-West Farmer . . . 3 yrs.
- ☐ Country Guide . . . 3 yrs.
- ☐ Current Thought . . . 1 yr.
- ☐ Pictorial Review . . . 1 yr.
- ☐ Canadian Magazine 1 yr.
- ☐ National Home Monthly . . . 1 yr.
- ☐ Canadian Horticulture & Home Magazine 1 yr.

Please clip list of Magazines after checking 3 Publications desired. Fill out coupon carefully.

Gentlemen: I enclose \$ Please send me the three magazines checked with a year's subscription to your newspaper.

Cadmium In Canada

First Output Recorded From British Columbia In 1938

Cadmium may be classed as one of a few metals, the consumers of which, rather than the producers, are concerned as to the supply. A by-product in the production of zinc and in some cases of lead, cadmium has been produced experimentally for close to half a century, but its commercial uses were greatly restricted until a few years ago, when new uses were developed and its former fields greatly extended. In 1933 the demand was so keen that the price rose from 55 cents a pound in January to \$1.50 a pound at the close of the year.

The sharp price rise and the rapid increase in the use of the metal have focused attention on the production of it in Canada, states a communication from the Department of Mines. Interest has been heightened also by the announcement that the largest metal mining enterprise in the Canadian mid-west has just commenced the production of cadmium. Production in Canada was recovered, dates back to 1928, when the first output was recorded in British Columbia. Only two enterprises produce the metal in Canada, and both companies obtain their output from the treatment of their zinc refinery residues.

The increase in the demand for cadmium during the past two years is due mainly to its use in plating metal for rust proofing and to the steadily increasing use of the metal in the production of bearing alloys for the motor industry. The use of cadmium-copper alloy for tramway and railway railway wires is also increasing, and the use of the alloy is being extended for overhead telephone and telegraph lines; for flexible telephone cords and similar cables, and for the electrodes of electric welding machines. A copper-cadmium alloy, consisting from 58 per cent to 1.0 per cent cadmium, is being introduced for long span, high voltage transmission lines, and its wide application in the arts, medicine, and in the dyeing industry.

Bird Held Up Traffic

Line Of Trams Walled—While Driver Captured White

A driving canopy loop in Vancouver caused a remarkable traffic jam in Canada. The bird was standing on a trans-line. Just as a train was about to run it down the driver applied his brakes and pulled up with a terrific jerk which caused the passengers inside to rush to their seats. Then the driver jumped down and tried to catch the canopy in his grip. The bird hopped away, and the driver followed, but again the bird hopped on. By this time traffic in the busy street had backed up to a standstill, and a long line of trams was waiting to pass. Still the driver pursued the canopy, and still the little bird hopped away. At length, amid the cheers of his passengers the driver caught the bird, just in time to hand it to the owner, an old lady who had rushed down from her flat overlooking the street. Then after smiles and bows all round the driver got back into his tram and the traffic started moving again.

Growth Of Life Insurance

Amount Of Insurance In Force In Canada Has Increased Eight Times In 25 Years

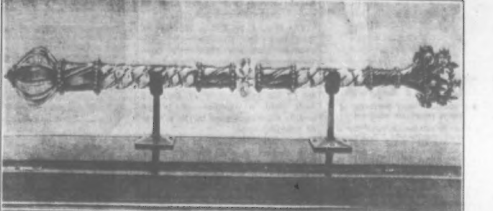

The tremendous growth of the life insurance business in Canada during the last 25 years has been in very large measure due to the unrelenting zeal and conscientious labors of a great body of men and women who have undeviatingly served the country. The fact that life insurance in force in Canada has increased in amount eight times during this period, so that the Dominion ranks second among the countries of the world on a per capita life insurance basis, is largely attributable to the work of the life insurance salesman. This growth is all the more remarkable when it is recalled that the population during the same period has increased by only 50 per cent.—Toronto Mail and Empire.

One Political Murder

Canada has had only one political assassination in history, and that, Ottawa reveals. It occurred on April 7, 1868, when Thomas d'Arcy McGee, Irish-Canadian member of the Dominion cabinet, was shot in an Ottawa street by a Belk Palmer.

Actor: "What about the salary?" Manager: "Suppose we call it \$50 a week." "All right." "Oh course, you understand that \$50 a week is merely what we call it—you will get \$5."

ANCIENT RELIC TO FIGURE PROMINENTLY IN CORONATION

The ancient crystal mass or sceptre of the City of London is only used in two ceremonies—Coronations and the Swearing-in ceremony of the Lord Mayor of London—and it will appear prominently in the Coronation of King Edward in May 1937. It is 18 inches long, and the shaft and knobs are of crystal set in gold. The head is a ring created under a hold coronet of four crosses, alternating with four fleur-de-lis, each being set with four pearls, with the time when the Kings of England were also Kings of France.

Tips To Increase Sales

Psychologist Reveals Facts And Facts About Retail Customers

Dr. Donald A. Laird, head of the College University department of psychology, gave Toledo business executives and university students these tips on increasing sales:

"Goods displayed in neat and unbroken stacks do not sell as readily as the same goods in a jumbled heap."

"Three out of four retail customers want to make right turns instead of left in the store, and they want to make turns about every 20 feet."

"The average man really has no time to go on by way of education and selection. It is much better to show him, to let him feel and hear, than it is to try to explain it to him."

"The still look first at something which is colored red, then green, then at orange. He looks at purple last. His attention shifts about every two seconds except when he is especially interested."

"Pictures appeal to him. A small advertisement which includes sales by one-third when it gives a picture of the watch was included."

"It is easier for him to read when black type is used on yellow paper. But the 'dirty' shades of yellow he dislikes more than any other color."

"He is prejudiced against products which have smelly odors. Wintergreen and peppermint are his favorites."

"It is hard for him to think. Explanations have to be given to him in easy stages."

"He is a creature of habit. Habit, the line of least resistance, causes untold sales resistance."

"Pulling doorbells to find out the reaction of consumers to new products is usually more helpful than a smoke laden confession of the best mind in the factory."

"Goods sell better when there is only a small quantity on display."

The College psychologist, whose home is in Hamilton, N.Y., offered the tips during a lecture on psychological surveys for business.

Guarded Famous Rebel

Officer Who Personally Attended Louis Riel To Death

Sidney George Mills, a member of the Royal Northwest Mounted Police from 1882 to 1888 and an officer of the force that personally attended Louis Riel prior to the rebel's execution, died recently at Hamilton, Ont., where for more than 40 years he was engaged in the insurance business.

He was of United Empire Loyalist stock, the son of the late George H. and Frances Mills, of Hamilton. At an early age he went west and joined the Mounted.

He was ordered on guard three nights a week for a month at the Regina jail where he was imprisoned and guarded till the night before the execution.

Why Spill It

The Toronto Globe says now it is that good old bit of verse about the work of the Hesperus that is being "denounced." The Hesperus going so far as to claim the vessel wasn't wrecked at all, but made port safely. Poor hat, why sell a stirring poem that has been the inspiration of many a school education at the closing exercises!

Wife: "How do you like the potato salad, dear?" Hubby: "Delicious! Did you buy it yourself?" Potatoes became a staple crop in Europe as a result of the great famine of 1771.

Has Become A Necessity

Mail Deliveries Would Be Unseen Without Elevator Service

There is an old saying that "you never miss the water till the well runs dry." A large section of the population in New York, accustomed to be whisked up and down their apartment, office and hotel buildings, realized during the recent strikes how much the elevator means to them. Buildings are growing taller, and it is no chery program to walk up to ten to twenty flights of stairs probably several times a day. The elevator started its conquest of New York about 80 years ago, when William James Otis stood on a wooden platform, had himself hoisted some 25 feet by a painting steam engine and, before an awestruck throng at the Crystal Palace Exhibition, dashed the rope which the elevator was suspended. The conception did not fail: Mr. Otis's safety device gave the invention all the impetus it needed for widespread adoption.

The first elevators were hydraulic, and there are still several in operation of them in New York, their mechanism going as far down into the well as they go into the air.

New York's longest, elevation, therefore the world's, is in the Empire State building, which extends 106 feet from the basement to the 86th floor.

In addition to passenger and freight elevators there are two or three hundred thousand dumb elevators in the metropolis conveying garbage and small package merchandise up and down.—St. Thomas Times-Journal.

Poultry On Prairies

Higher Prices Last Year Meant Increase Of Revenue

Although the poultry production of the three prairie provinces was smaller last year than in 1934, the higher prices paid to the farmers for poultry, resulted in a marked increase of revenue, the 1935 figure being \$18,141,000 and that of 1934, \$14,576,000. By provinces, the receipts were as follows: Manitoba, \$4,382,000; Saskatchewan, \$5,879,000; Alberta, \$6,000,000. Improvement in breeding stock was a notable feature in poultry development in the three prairie provinces during the year.

A consultant teacher was giving a lecture to a class of small children on a canary.

Teacher:—Can any boy tell what a canary can do and I can't?" Sharp Boy:—Please, May, have a tail in a saucer.

Stone Age Babies

Just As Adaptable As Those Of Modern Days, Says Dr. Durant

If it were possible to place Stone Age babies in to-day's cradles they would be able to hold their own with their modern brothers and sisters when they grew up, provided they were afforded equal opportunities, Dr. Will Durant, author and philosopher, said in an interview at Toronto.

Like those Stone Age babies grow up they would be able to drive motor cars, go to university and do the modern dance steps. And if a present-day baby could have been spritely into the dark cave of a Stone Age couple, the child would grow up to be just as adept with a crude club as his companion.

"It is what happens to an after birth that matters," Dr. Durant said. "The baby in the new was practically the same now as it was in the Stone Age."

Dr. Durant had a wholesome interest in the Dinosaur quadruplets. "From one standpoint their birth is an argument in favor of evolution, according to point to the fact we evolved from the lower animals," he said.

Over Hundred Years Old

Maple Sugar Industry Was Started Near Montreal In 1600

News that the sap was running in the maple trees caused the Department of Agriculture to disclose the white man's maple-sugar industry in Canada is 130 years old this spring and that about 50,000 farmers from Western Ontario to the Atlantic seaboard share in the harvest.

The Department estimates about 700,000 maple trees produce sap in Eastern Canada, but that only about one-third of that number is tapped. Nevertheless the value of last year's sugar and syrup harvest was \$3,325,450, an increase in a year of \$461,500.

The maple-sugar industry was started in 1600, about an Acadian near Montreal.

Fundamentals Of Money

Grasman F. Towers, governor of the Bank of Canada, told the annual meeting of the Commerce Club of Queen's University that "a grasp of the fundamentals of money and banking were never more essential than they are to-day." In explaining the aims, functions and responsibilities of a central bank Mr. Towers said university-trained youths are "vitally essential."

Women Police In Poland

Are Specially Trained And Must Serve Four Years

Poland's blue-uniformed policemen are making a big hit with children; so much so that many a youngster yells "Police!" instead of "Mama!" when he needs a friend. Typical was the case of the little boy whose red balloon escaped on the boulevard. His screams brought a young policeman who saw the balloon caught in a tree and promptly climbed up after it.

The women police force was organized in 1925 to help the government's fight against white slavery and the traffic in dangerous drugs.

Chief of the organization is Miss Stanislas Palagotko, who was an officer of the Polish army in the war with Soviet Russia. Under her leadership the women police see their greatest responsibility and opportunity in the field of social welfare. They have established homes for wayward girls and now superintend the care of homeless children.

The policemen are recruited from healthy, unmarried applicants between the ages of 21 and 30. They must undergo six months of special training, and must sign for four years' service. During those four years they are bound to celibacy and should they continue to serve after the four years have elapsed they must wait six additional years before marriage.

The girl who signs up at 21 and takes her oath of service seriously must wait until she is 28 before she can marry.

Inasmuch as most of the women police look so attractive in their navy blue uniforms that they turn many a young man's head, the seven-year wait has its disadvantages. It is already said to have complicated several romances heart-breaking. On the other hand, heartache proves more promptly when the "one and only girl" they may just find the police.

New Road Material

Salt Now Used Successfully In Building Highways

Salt is being utilized to aid highway building, the Canadian Institute of Mining and Metallurgy, was told. Use of salt mixed with clay to construct firm, durable, all-weather roads, capable of carrying a daily load of thousands of cars and heavy trucks, was described by C. A. Hays, chief of the Ontario department of highways.

The roadway under construction is smoothed, stamped and rolled and the mixed "salt-stabilized" material placed in layers on the damp base. Roughly one pound of salt per square yard per inch of thickness has been found to be adequate. Such "salt-stabilized" roads have been successfully built in Quebec and the United States.

A new commercial product, "super-rubber," a man-made rubber was described in a paper presented by V. A. Coles, Montreal. The rubber, made from coal, limestone, salt and water, was many respects superior to natural rubber in its resistance to oils, sunlight and age, he said. It could be used for every purpose natural rubber was used for and was being manufactured on a commercial scale at the rate of 1,000,000 pounds a year.

Letters Must Be Brief

Appeal Sent To Italians To Save Precious Paper

Italians must learn the art of brevity in writing, as a part of their sanctified-defeating program. "Fewer letters, shorter letters, no return envelopes and, where it is possible, no outer envelopes for printed matter delivered by messenger," is the essence of an appeal issued to Italians in what amounts to a national effort to still further reduce paper consumption.

The appeal, in part, reads: "Briefly, please! Before commencing to write a letter, first ask yourself: 'Is it necessary?' If you are not sure, then the letter is not a necessary one."

"Save time and postage for yourself, and precious paper for the fatherland."

"If you must write a letter, rigidly confine yourself to one sheet only. A two-page letter can be just as eloquent, or a complaint to the newspaper about the annoying mail, needling jowling of the evils of the mail can be just as well written on one sheet as on five."

"I am glad it is no longer the fashion to wear a watch with a dead man."

"Why?" "Because I never possess both at once."

Still Be Mosquitoes

But Plan To Cope Them Might Add To Scientific Knowledge

How far a mosquito can fly and travel effectively is a question on which there is not much dependable information. Science knows, in a general way, that the salt-water variety is stronger on the wing than the fresh-water variety, but accurate details are extremely incomplete. The problem is complicated by the fondness of the mosquito for stealing rides. It is a frequent stowaway on steamships, trains, motorcars and even planes, thus extending its zone of operations indefinitely. It revels in heat and is proof against the cold of Siberia, having recently been found guilty of debarking at a port of tropical fever in the perpetual cold of the Far North.

Its problem of supply is simple. If no human beings or other animals are available, it becomes a vegetarian and subsists on the juices of plants until better luck comes to spend the short insect summer is not a difficult question, for the mosquito breeds in any stagnant water and at any altitude in the mountains up to 13,000 feet. These conditions of endurance and resourcefulness have not endeared it to man, however. Much effort and vast sums of money have been spent in efforts to exterminate it, but in vain, with only very moderate success.

At least attempt, just announced at the meeting in Atlantic City of the New Jersey Mosquito Extirpation Association, has picturesque aspects. It is to be held in a district west of Chicago where insect life is especially abundant, as they are pests of mosquitoes, as they rise from the ground in the summer of different colors. By this plan it is hoped that migratory insects will be easily identified as to their color and their habits, and that further information as to their powers of flight be gathered. It is hoped that this will bring about insect visitors next summer the sum of scientific knowledge may be added in, even if the discomfort of the itinerary is increased.—New York Herald Tribune.

It is to be held in a district west of Chicago where insect life is especially abundant, as they are pests of mosquitoes, as they rise from the ground in the summer of different colors. By this plan it is hoped that migratory insects will be easily identified as to their color and their habits, and that further information as to their powers of flight be gathered. It is hoped that this will bring about insect visitors next summer the sum of scientific knowledge may be added in, even if the discomfort of the itinerary is increased.—New York Herald Tribune.

At least attempt, just announced at the meeting in Atlantic City of the New Jersey Mosquito Extirpation Association, has picturesque aspects. ASK YOUR DOCTOR FIRST, MOTHER

Before You Give Your Child an Unknown Remedy to Take

Every day, unthinkingly, mothers take the advice of unqualified persons instead of their doctors'—in prescribing for their children.

If they knew what the scientists know, they would never take this chance.

Doctors Say PHILLIPS' For Your Child

When it comes to the frequently used "milk of magnesia" doctors, for over twenty years, have said "PHILLIPS' Milk of Magnesia" is the safe remedy for your child.

Remember this—And Always Say "Phillips' When You Buy. Your child deserves it for your peace of mind, see that you get it—Genuine Phillips' Milk of Magnesia.

Also in Tablet Form

Phillips' Milk of Magnesia Tablets are now on the market. They are available everywhere. Each tin tells you the name of the nearest dealer.

Phillips' Milk of Magnesia

MADE IN CANADA

WORLD HAPPENINGS BRIEFLY TOLD

Given an average growing season, the prairie provinces will produce a 400,000,000-bushel wheat crop this year, W. M. Neal, vice-president of the International Institute of Western Lines, said at Vancouver.

A special House committee of 28 members has been established to investigate problems relating to penicillin and returned soldiers. Pension Minister Power moved the necessary motion.

About 32,000,000 acres have been sown to wheat in British India this year, the International Institute of Agriculture estimated. The area under cultivation is slightly smaller than that of last year.

Figures of King George and Queen Mary are to be included in a stained-glass window in the northwest transept of Liverpool cathedral, the window being to commemorate the cathedral's consecration.

Doves planted in Canada during 1935 showed a substantial increase compared with the previous year, according to a report issued by the Dominion bureau of statistics.

Labour Minister Rogers announced in the House of Commons no more men were being admitted to relief camps, in line with the government's determination to close them as soon as possible.

Falling overhead from a launch, Seaman Ernest Brown of the Canadian destroyer Saguenay was drowned at Kingston, Jamaica, where the Saguenay had gone with the British West Indies squadron, on its annual spring cruise.

Aid By Novel Method

Italiane Sending Letters Home Engraved On Copper

Italians living in the United States have found a novel method of aiding the mother country in its battle against League of Nations restrictions.

A large number of letters, the writing engraved on paper-like sheets of copper inserted in an ordinary envelope, have been received at Naples and in other Italian ports. The copper can be used in manufacture of munitions.

Wireless telephone service has been established between the Chinese cities of Canton and Hankow.

TO STOP ITCHING AND TO CLEAR UP

ECZEMA AND SKIN RASHES—USE

D.D.D.

Dr. D. D. Dennis' Liquid Penetrating, made and sold exclusively by makers of Campana's Italian Balm. Treat little skin on your druggist.

Don't long for "hellebore"—make them yourself. All you have to do is to hold and repeat a simple square, whose pattern you'll learn by heart in almost no time. They'll soon be rolling off your tongue at a great rate. For you see, string for these, and string little up very quickly. When you've a quantity laid by, join them for a handsome bedspread, duster or tea cloth, scarf or pillow. Only four squares are needed to complete the main motif.

In pattern 5567 you will find complete instructions for making the square design an illustration of it, and of the striking material requirements.

To obtain this pattern and 30 cents in stamps or coin (coin preferred), to Household Arts Dept., Winnipeg Newspaper Union, 110 McLeod Ave. R., Winnipeg.

There is no Alice Brooks pattern book published.

China's First Girl Flyer

WHI Aerialist Awaits the Return to China of the pretty 23-year-old Miss Ya Chingling, from her flying exploits in the United States. She completed her course at the Boeing School of Aeronautics and plans to continue her work in her own country.

Miss Ya with reluctance told how she unwittingly became a member of the Caterpillar Club. Flying over San Francisco Bay with her instructor, she told to take the machine into a dizzy barrel roll.

At a critical moment of the manoeuvre her safety belt came unfastened and in a second she was hurtling toward the water. Miss Ya's presence of mind came to her rescue and she pulled the rip cord of her parachute to float lightly to the bay where she was picked up by a naval vessel.

The young aviator is also well versed in blind flying, having made a successful test flight from Oakland to Reno, she plans to tour her native land and demonstrate some of the tricks of the trade she picked up in America. Naturally she will be received open-mouthed by her people who have never seen these air stunts, not to mention one of this kind given the confusion of what in plain English is a "ricksha go tuckie."

New Type Of Camera Eye

Takes The Uncertainty Out Of Flashlight Photography

A new type of camera eye which takes the main uncertainty out of flashlight photography was announced by H. M. Blole, chief engineer of the Associated Press. It was worked out in the A.P. research and development laboratory.

The photoelectric cell, operating as a real eye, is set in the photographer's reflector behind the flash bulb. The cell sees the flash from behind.

It means that no living eye can and what mechanical devices previously have missed, the building up of the flash. On the average, five thousandths of a second are required from the beginning of the burning flash until its light reaches a peak.

The photoelectric cell watches this rising light, and sets off an electromagnetic trigger which opens the camera shutter at precisely the thousandth of a second of brightest light.

In one thousandth there the new eye never missed one.

Ancient Mine Discovered

A copper mine which is said to be 3,000 years old has been discovered in Kishor, Poland. The works are in a wonderful state of preservation, and implements and tools have been found. Engravings of the planetary signs and inscriptions decorate many of the galleries.

Progress Is Slow

Scientists in Germany and Italy have recently produced materials which are claimed to be good substitutes for gum. The production and consumption of these, however, has made very slow progress and little or no effect on the world trade in natural wood has been noted.

An English church built in 1380 has a wall painting which shows bobbed hair.

THE REVIEW, REDCLIFF, ALBERTA

GOVERNOR-GENERAL'S MEDALS

Bronze Medals For Competition In Saskatchewan Schools

The Hon. J. W. Ealey, Minister of Education for Saskatchewan, announced that His Excellency, Lord Tweedsmuir, Governor-General of Canada, has graciously signified his intention of following the practice set by his predecessors of donating each year a number of bronze medals for competition in the schools of Saskatchewan.

The recommendation of the minister respecting the distribution of the medals for the year ending June 30, 1936, has been approved by His Excellency and is as follows:

(a) Two medals to be awarded in each of the cities of Regina, Saskatoon and Moose Jaw, one to the boy and one to the girl from the collegiate institutes or technical schools therein, obtaining the highest standing at the complete grade twelve departmental examinations;

(b) Two medals to be awarded, one to the boy and one to the girl, obtaining the highest standing of all the candidates in the complete grade twelve departmental examination from the collegiate institutes in the other cities of the province;

(c) One medal to be awarded to each of the four highest ranking boys and each of the four highest ranking girls in the complete grade twelve departmental examination from town schools;

Provided that not more than one boy and not more than one girl in any school in (c) may qualify for a medal;

(d) Two medals to be awarded, one to the boy and one to the girl, obtaining the highest standing at the complete grade twelve examination from village and rural schools in each of four zones into which the province is divided by the 3rd meridian line and the line between townships 24 and 25.

Rare Surgical Operation

Child Recovering After Mysterious Organs Adjusted By Surgeon

As the result of a rare surgical operation, Gary Reuther, 2½ years old, born with his internal organs in his left lung, was recovering at Oakland, California.

A surgeon, who requested, his name be withheld, found to his astonishment the child had been breathing with only one lung since birth.

Gary's organs, including his stomach, spleen and intestine, were in his left lung. The lung was unable to expand and the heart also had been pushed over to the right side.

The surgeon carefully cut away three ribs and performed the delicate operation, using special or corrective tissue from the mother's body.

Third Largest Grain Crop

Barley is Canada's third largest grain crop. It follows wheat and oats, but the barley production is usually less than one-quarter that of wheat. Barley contains more starch and more crude fibre than wheat, but a bushel of barley weighs only 48 pounds as against 60 of wheat.

Production was the largest since 1930 and amounted to a gain of 60 per cent over the low year of 1932. Barley for human and livestock, the two major commodities, were little changed, although single price rose.

Germany operates more motorcycles than any other country in the world.

Television receiving sets were first shown to the German public at the radio show this year in Berlin.

Whenever you entertain... Christie's "Ritz", the tender and toasted, nutty-flavored, slightly salty, little Waters by Christie's, must be your biscuit choice. They actually improve the taste of soups, chutneys, salads... of practically any food or drink you serve. Always keep a few in the house. Everybody enjoys their irresistible flavor.

Christie's Biscuits

"There's a Christie Biscuit for every taste"

British Aircraft

Sir Philip Sassoon Sees Bright Future For Royal Air Force

A bright future for the Royal Air Force and the British aircraft industry was pictured by Sir Philip Sassoon, under-secretary of state for air, in introducing the air force estimates in the British House of Commons.

British aircraft were being used in 25 countries, aeroplanes engines in 25 countries, and foreign inquiries for the purchase of British planes were arriving continuously, Sir Philip said.

The equipment of the Royal Air Force would be second to none, the under-secretary said in outlining the ministry's plans for expanding the service during the coming years. In the next three years, Sir Philip said, the air force would take delivery of a substantially larger number of machines than in the previous 17 years since the war. By the end of 1936 first line strength will have been doubled in two years.

The air ministry was most satisfied with the new types of aircraft now being introduced in the force, Sir Philip cited as an example a new single-seater with a speed of more than 300 miles an hour, while another type undergoing trials promised a speed at least as great. The air force also had two or three promising types of medium bombing planes.

The under-secretary described a new system of geodetic construction without internal struts in the fuselage being taken by a surface structure formed of metal backbone, the result being strength, unrestricted internal storage and substantial saving in weight.

The present program provided for 123 aeroplanes comprising 1500 first-line aircraft, while adequate reserves of up-to-date machines were being created.

Radio Taking Over Job

U.S. Will Install Apparatus To Replace Lighthouse Keeper

The lighthouse keeper, hero of many a saga of the sea, will be replaced by his lonely watch over Great Lakes shipping this season to a lighthouse operated with radio signals by remote control, a radio telephone to the unattended lighthouse will reveal to the shore attendant whether his signals have been executed. The United States bureau at Washington said the operating apparatus would be installed in duplicate to safeguard against a breakdown.

Temporary Penitentiary

Two permanent wards a year, properly applied, may be had without injury to the hair or scalp, say the doctors. No wonder foreigners have such a difficult time understanding our language. Here they are "permanents" whom you must have it done twice a year!

 came effective on April 1 contin-
 ued at the licence bureau at
 the court house in Medicine Hat

Invitations are now out for
 the A Y P A dance to be held in
 Cliff Hall on Easter Monday,
 April 3rd. This promises to
 be one of the most interesting
 events of the season.

Mr. Fred Parsons, an em-
 ployee of the Dominion Glas
 plant, has purchased Mayor
 H. M. Sangster's residence on
 Fifth street, and will move into
 it shortly.

LEGION MEETING

The regular monthly meeting
 of the local Legion will be post-
 poned till Sunday April 19th
 as the regular meeting day will
 be Easter Monday. A full at-
 tendance is requested.
